

**Amendments to the Claims are as follows:**

Claims 1-6 Cancelled

7. (New) A liquid crystal display comprising:

a pair of substrates which oppose each other with a liquid crystal layer therebetween;

a light source provided on an exterior of one of the substrates;

and

a transflective layer comprising at least an organic film and a metallic reflection film disposed on an inner face of one of the substrates,

wherein a plurality of concave portions are contiguously formed on a surface of the organic film, an inner surface of each concave portion constituting a part of a spherical surface,

wherein a depth of the concave portions is in the range of 0.1 to 3  $\mu\text{m}$ , an inclination angle of the inner surface of each concave portion is in the range of -30 degrees to +30 degrees, and a pitch of adjoining concave portions is in the range of 5 to 50  $\mu\text{m}$ .

8. (New) A liquid crystal display comprising:

a pair of substrates which oppose each other with a liquid crystal layer therebetween;

a light source provided on an exterior of one of the substrates;

and

a transflector comprising at least a resin base and a metallic reflection film disposed on an outer face of one of the substrates;

wherein a plurality of concave portions are contiguously formed on a surface of the resin base, an inner surface of each concave portion constituting a part of a spherical surface,

wherein a depth of the concave portions is in the range of 0.1 to 3  $\mu\text{m}$ , an inclination angle of the inner surface of each concave portion is in the range of -30 degrees to +30 degrees, and a pitch of adjoining concave portions is in the range of 5 to 50  $\mu\text{m}$ .

9. (New) A liquid crystal display according to Claim 8, wherein the metallic reflection film has a thickness of 80 to 500 Å.
